$N^*(\delta)$ theory (stable, $\alpha = 0.3$)
E_2: $N = 0$ (stable, $\delta > \delta_c$)
E_2: $N = 0$ (unstable, $\delta < \delta_c$)
Numerical $\langle N \rangle_{t=18}$
$\delta_c = \omega/\gamma = 1.6$
(bifurcation)
$\langle N \rangle$ at $t = 18$
