(a) tumour profile, planar front
$t = 5$
$t = 20$
$t = 40$
$t = 60$
$t = 75$
level set $T = 0.5$
$T(x, L_y/2, t)$
x
(b) front trajectory
measured $x_{\text{front}}(t)$
fit on $t \in [55, 75]$: slope $= 0.1455$
KPP speed $c^* = 0.1449$
front position $x_{\text{front}}(t)$
time t
(c) approach to the KPP speed
early window
(transient)
KPP minimal speed c^*
measured c_{num}/c^*
c_{num}/c^*
centre of the fitting window
